Travis Lamberte

Seattle, WA | 425-443-4812 |- travis@lamberte.com | GitHub | LinkedIn | travislambere.com

Data Engineer | Python • SQL • ETL • Cloud

Data Engineer with a systems-engineering background and an MS in Data Science, specializing in Python, SQL, ETL pipelines, and cloud-based data workflows. Experienced in designing reproducible data systems, automating processes, and translating complex technical problems into clear, actionable solutions. Currently building a real-time data platform (Penny Adventure) integrating ETL pipelines, Django REST APIs, and geospatial visualization. Known for operational clarity, strong documentation, and a hands-on engineering approach that bridges data, software, and infrastructure.

Technical Expertise

Programming & Data Tools
- Python (Pandas, NumPy, Scikit-learn)
- SQL (PostgreSQL, MySQL, SQLite)
- ETL development, data cleaning, data modeling
- Jupyter, VS Code, Git, GitHub

Data Engineering & Pipelines
- ETL workflows (extract, transform, load)
- API-driven data ingestion
- Batch processing, automation, reproducible pipelines
- Data validation, schema design, documentation

Cloud & Infrastructure
- Linux administration (Ubuntu, Debian)
- Docker, containerized workflows
- Bash scripting, cron automation

Web & API Development
- Django & Django REST Framework
- REST API design, JSON serialization
- Basic front-end: React, JavaScript, HTML, CSS

Machine Learning & Analytics
- Supervised/unsupervised learning
- Feature engineering, model evaluation
- Exploratory data analysis, visualization

Experience

***Software Support Specialist (Contract)* - PACCAR Parts | Renton, Washington -** *July 2024 - February 2025*
- Launched a pilot program for enterprise vehicle support software, improving system reliability and enabling data driven troubleshooting across high volume customer environments.
- Delivered Tier II technical support for complex software, connectivity, and integration issues, analyzing logs and configuration data to identify root causes.
- Created clear documentation and reproducible workflows that improved resolution speed and supported cross team knowledge sharing.
- Consistently exceeded SLA and performance metrics through efficient triage, structured problem solving, and effective escalation management.
- Collaborated with engineering teams to validate defects, refine requirements, and improve system behavior based on real-world usage data.

***Mobile Phone Drive Testing Technician (Contract)* - K&M Systems | Seattle, Washington -** *March 2024 - July 2024*
- Performed large-scale wireless network testing and data validation for pre-market mobile devices, ensuring accuracy and completeness of collected datasets.

- Processed, compressed, and uploaded structured test data to engineering servers, supporting analytics workflows and device readiness assessments.
- Identified connectivity anomalies and contributed findings to cross-functional engineering teams for performance tuning and issue resolution.
- Followed strict data collection protocols to maintain consistency, reproducibility, and integrity across test cycles.

***Chemist - Metallurgy - Melt Deck Operations* - North Star Casteel | Seattle, Washington -** *July 2007 - November 2022*

- Managed mission-critical analytical systems and ensured data accuracy for production-grade metallurgical quality control, supporting real-time decision making.
- Led teams, trained staff on technical procedures, and enforced environmental and regulatory standards.
- Optimized material usage and inventory with data-driven forecasting, reduced downtime and improved efficiency.
- Maintained and calibrated instruments, and validated measurement data to ensure reliability of production metrics.

Projects

Penny Adventure — Full-Stack Data Engineering Platform - ***Python, Django, SQL, ETL, Pandas, Geospatial Visualization***

- Architecting a data platform that aggregates, cleans, and analyzes penny press machine data from multiple sources.
- Developing interactive maps to explore machine distribution, regional patterns, and historical trends.
- Maintaining a public GitHub repo with daily development logs, clear documentation, and reproducible workflows.
  GitHub: https://github.com/seattletravis/penny_adventure

Uncha BG Remover — Image Processing Pipeline - ***Python, OpenCV***

- Built a batch processing web application that removes image backgrounds using classical computer vision techniques and thresholding algorithms.
- Developed a responsive React frontend enabling drag and drop uploads, preview rendering, and user-friendly interaction.
- Containerized the application for reproducible deployment and streamlined local development.
  Demo: https://youtu.be/wbjmltaJSnk

Bar Chart Race — Data Visualization & Animation - ***Python, Pandas, Matplotlib, Data Wrangling***

- Created a dynamic bar-chart race visualization to animate changes in ranked values over time using real datasets.
- Automated frame generation and animation export using Matplotlib and custom Python scripts.
- Produced full data visualization videos explaining trends, context, and insights revealed by the animation.

Education & Certifications

Eastern University | St. Davids, Pennsylvania – Master of Science in Data Science

- GPA: 4.0 / 4.0
- Completed Coursework in Machine Learning, Data Engineering, Statistical Modeling, Database Systems
- Tools used: Python, SQL, Pandas, Scikit-learn, Jupyter, PGAdmin4, R

Central Washington University | Ellensburg, Washington – Bachelor of Science in Chemistry

- Received minor in Mathematics
- Completed advanced coursework in thermodynamics, spectroscopy, and material science

CompTIA A+ Certification – Industry standard in IT support Verify Credential
Focus on hardware, software, and networking issues across multiple OS including Windows, macOS, Linux, and mobile OS.
